Tool Measurement

Infrared Transmission

Linear Working Principle

Wear-free Measuring Mechanism

Tool Breakage Detection

Tool Length Measurement

Axes Compensation

# Tool Setting Probe Z-Nano IR

**BLUM**  
focus on productivity

# Z-Nano IR | Tool Setting Probe | Tactile tool setting system with infrared transmission

## Extremely precise infrared probe – flexible tool setting probe with linear working principle for monitoring of smallest tools

- Tool breakage detection
- Tool length measurement
- Axes compensation
- Solution for machines with pallet changer

### Your benefit:

- Extremely fast tool breakage detection
- No subsequent damage due to tool breakage
- Fast ROI
- No-wear, optoelectronic measuring mechanism
- Compact and robust design

### Linear working principle

Due to the linear working principle the probe provides a minimal and torque-free measuring force. Even the most sensitive and smallest tool diameters can be measured extremely precise.

Fast tool breakage detection on horizontal machining centre with pallet changer

Z-Nano IR and TC54-10 in DUO-Mode

Many accessories available: chip protection, cleaning nozzle and mounting system, etc.

Exchangeable measuring surface

### Technical data

Protection class	IP68
Approach direction	-Z
Meas. force vertical mounting *	2.2 N   with chip protection: 2.4 N
Meas. force horizontal mounting *	3.0 N   with chip protection: 3.2 N
Max. stroke	10 mm
Trigger point *	1 mm
Repeatability	0.5 µm 2σ
Max. probing speed	2 m/min
Min. tool diameter **	> 0.1 mm/with chip protection: 0.2 mm
Signal transmission   Range	Infrared   ±60° in Z, 360° in X/Y
Mass	290 g
Battery (2 pieces)	Saft Lithium LS14250 (½ AA, 3.6 V) 1200 mAh

\* Measuring force with chip protection & additional spring; see data sheet

\*\* Depending on geometry and material of tool. Probing force must not result in damage of tool
